Profile

Data Analyst with a Computer Engineering background, experienced across the full data lifecycle raw data ingestion, quality validation, dimensional modeling, and executive-ready visualization. Proficient in advanced **PostgreSQL** including window functions **ROW NUMBER, RANK, Dense Rank, LAG, CTEs, correlated subqueries** and multi-table **JOINS**. Designed **Medallion Architecture pipelines (Bronze → Silver → Gold)** and star schema databases from scratch on multi-million row datasets. Built interactive Tableau storyboards and dashboards translating complex SQL outputs into operational insights for fleet management, revenue analysis, and zone-level performance reporting. Completed end-to-end analytics projects across retail (Walmart), search engine (Cliqz), and transportation (NYC Taxi 3.4M records) domains. Aligned with **Saudi Arabia's Vision 2030** digital transformation goals.

Projects

Case Study Project NYC Yellow Taxi Trip Analysis 2025:

PostgreSQL, Tableau, January 2025 — 3.4M records

- Built a 2-stage **Bronze → Silver → Gold** Medallion pipeline in **PostgreSQL removing 659,613 invalid records** across two validation layers, reducing **3.4M** raw trips to **2.8M** analysis-ready records
- Traced **145,516 negative fare** anomalies to VeriFone dispute reversals through vendor-level JOIN investigation turning a data error into an actionable vendor performance finding.
- Identified **credit cards** as the dominant revenue stream **86%** of total January 2025 revenue **67.2M** across **2.4M trips**, directly informing payment infrastructure decisions.
- Discovered only 4 of 24 hours ranked top 10 for both trip volume and revenue per trip simultaneously a fleet deployment insight that changes driver allocation strategy
- Designed a 6-table star schema (1 fact + 5 dimensions) across 265 NYC pickup zones enabling borough, vendor, payment, and time-of-day analysis independently
- Delivered 4 executive outputs Tableau storyboard, PowerPoint brief, Excel technical file, and ERD data dictionary structured for operations and finance audience

Walmart Store Data Analytics Project:

Advanced Excel, Hypothesis Testing, Statistical Analysis

- Analyzed **65k+ rows** of Walmart sales data to understand performance across stores and evaluate the impact of holidays on weekly sales.
- Holiday periods drove **52%** of total sales; strong spikes in Dec 2022 2023.
- External factors showed no real effect on sales (Corr: Unemployment -0.0469, Temp -0.028, Fuel 0.007).
- Strong positive link between Sales Sales per Sq. Ft (Corr 0.75), indicating store efficiency drives revenue.
- **Business Problem:** Identify why certain stores outperform others and assess how holiday seasons influence weekly sales patterns. Provided actionable recommendations based on the findings.
- **Approach:** Applied Advanced Excel, Pivot Tables, Lookups, hypothesis testing, and statistical analysis to uncover key drivers of store performance and quantify holiday effects.
- **Recommendations:** Strengthen holiday promotions in low-performing stores, improve seasonal inventory planning, and focus on weaker store types and departments.

Case Study Project Cliqz Search Engine Forecasting Analysis:

Advanced Excel, Tableau

- Analyzed **70K+** search query records to uncover user-behavior patterns across countries, hours, and query types.
- Built a time-series **forecasting model** that predicted **2.7K hourly queries**, recommending **3K queries/hour server** capacity for stable performance.
- Designed interactive Tableau dashboards highlighting search volume trends, country comparisons, query-length insights, and predicted load for operational planning.
- Utilized Advanced Excel (XLOOKUP, data cleaning, timestamp conversions) to prepare and integrate multi-source datasets prior to visualization.
- Delivered a structured data story linking user-behavior insights to business and technical decisions, including server scaling and optimization opportunities.

EXPERIENCE

Jr. Planning Engineer

Shandong Tiejun Electric Power Engineering Co, Ltd

Feb 2025 – Present

Onsite – Riyadh, Saudi Arabia

- Collected daily progress updates from Mechanical, Electrical, Instrumentation Control and Civil departments, consolidating multi-source data into structured daily reports for senior management review.
- Prepared weekly progress reports by gathering department updates, tracking ongoing activities and documenting three-week look-ahead plans to support proactive task prioritization and on-time delivery.
- Monitored and reported weekly equipment delivery status including Gas Turbines, HRSGs and procurement shipments enabling early identification of supply chain delays and corrective action planning.
- Compiled monthly progress reports summarizing completed activities, ongoing work and upcoming milestones across Mechanical, Electrical, Instrumentation Control and Civil departments.
- Updated and maintained project S-curves on a monthly basis under manager supervision, tracking planned vs. actual progress to identify variances and support executive decision-making.
- Tracked and reported Factory Acceptance Test (FAT) results and procurement delivery updates in monthly reports, ensuring accurate project status visibility across all stakeholders.
- Supported the QC department by receiving and updating the Engineering Change Control (ECC) list on a weekly basis, maintaining accurate records of project change documentation.
- Developed a basic Work Breakdown Structure (WBS) in Primavera P6 under direct manager guidance, gaining foundational exposure to industry standard project scheduling software.
- Coordinated data collection across five departments simultaneously, developing strong cross-functional communication and structured data management habits directly applicable to Data Analyst roles..

TECHNICAL SKILLS

Tools : PostgreSQL, Python, Tableau, Advanced Microsoft Excel

Others : Storytelling, Business Acumen, AI in Data Analytics, Data Visualization & Reporting.

EDUCATION

Khwaja Fareed University of Engineering & Information Technology (KFUEIT)

Bachelor of Engineering in Computer Engineering

Pakistan

Sep 2019 – Aug 2023

CERTIFICATIONS

- Data Analytics Bootcamp: Atom Camp
- IBM Data Analyst (9 Course Series): Coursera
